# 1 Practice

Rate of Change and Slope

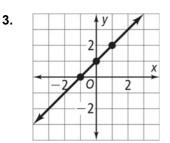

Each rate of change is constant. Find the rate of change and explain what it represents.

# 3-1 Practice (continued)

Rate of Change and Slope

Without graphing, tell whether the slope of a line that models each linear relationship is *positive*, *negative*, *zero*, or *undefined*. Then find the slope.

**13.** The cost of a pair of jeans is \$22.50 for 1 pair and \$67.50 for 3 pairs.

**14.** An employee earns \$28.50 after 3 hours and \$237.50 after 25 hours.

#### State the independent variable and the dependent variable in each situation. Then find the rate of change for each situation.

**15.** The cost of three gallons of milk is \$8.85 and five gallons of milk is \$14.75.

**16.** Jacques filled 10 envelopes in 1 minute and 100 envelopes in 10 minutes.

#### Find the slope of the line that passes through each pair of points.

<b>17</b> (7, -1), (7, 1)	<b>18</b> (3, -2), (-2.5, 9)
<b>19</b> $\left(\frac{1}{3}, \frac{2}{5}\right), \left(-\frac{1}{3}, \frac{3}{5}\right)$	<b>20</b> $\left(-\frac{3}{4},\frac{2}{3}\right), \left(-\frac{3}{4},\frac{5}{3}\right)$

- **21. Writing** Explain why the slope of a vertical line is always undefined.
- **22. Writing** Describe how to draw a line that passes through the origin and has a slope of  $\frac{3}{5}$ .

Each pair of points lies on a line with the given slope. Find x or y.

**23.** (2, 2), (5, y); slope = 2 **24.** (9, 4), (x, 6); slope =  $-\frac{1}{3}$
